When we design a kitchen, we also consider the context where it will be installed, taking care over every tiniest detail to ensure it fits perfectly into your world. This is essential to create a **unique kitchen**, in harmony with space and time. Ernestomeda has been designing kitchens for more than 15 years, responding to the demands of an increasingly aware, discerning market attentive to the **latest aesthetic** and **functional trends** in product design as well as to **price** considerations. Ernestomeda's creations are more than an attractive combination of well designed cabinets: they meet the expectations of those who are not satisfied with just looking at a lovely kitchen but wish to aspire to **solutions** with **excellent qualities** and impeccable **design**, kitchens of almost unthinkable perfection. Built for those in search of a **lasting investment** or seeking to express a personal **idea of beauty** that is both clearly distinctive and simply achievable.

## Integrated handles

Naturally, the wide range of handles illustrated in this catalogue is available in a vast assortment of finishes and sizes. Ernestomeda Dealers will be able to provide details of all the countless possibilities.

# em

Ernestomeda has launched the **ENVIRONMENT** project, representing a responsible, hands-on approach that reflects the company's "green side" through small but significant steps towards **eco-sustainable industrial development**.

In January 2009 Ernestomeda started to use **ZEROE PLANET**, electricity produced solely from renewable sources with **ZERO impact** in partnership with **LIFE GATE EDISON ENERGIA** and certified by the **RECS (Renewable Energy Certificate System)** mark. Under the **ZEROE PLANET** programme, all CO2 emissions generated in every phase of production are compensated through the creation and protection of areas of woodland in Italy and Costa Rica. Ernestomeda has also adopted **IDROLEB**, the exclusive environment-friendly, water-repellent panel with the **lowest formaldehyde emissions** in the world for the construction of its kitchens' structures. The environment-friendly panel is made from 100% post-consumption wood.

Our constant future-oriented approach has now brought us to a major milestone: with a roof of 16,000 square metres of photovoltaic panels on top of our plant, we have become self-sufficient in energy. Our photovoltaic power plant has a generation capacity of 1.2 MWP and enables us to avoid the emission of about 722,160 kg of carbon dioxide a year, the quantity absorbed by 93,800 trees. There is still a long way to go, but we are working to be more and more intelligent and far-sighted in our relationship with the environment around us.

**UNI EN ISO 9001** Quality Management System, with the primary objective of full customer satisfaction and the continuous improvement of all production processes.

**UNI EN ISO 14001** Environmental Management System, for monitoring energy consumption, atmospheric emissions, waste management and all aspects involved in an environmentally responsible approach.

**OHSAS 18001** Occupational Health and Safety Management System, regulating the procedures by which the company recognises and deals with the incidents which may occur during operations to guarantee its workers' safety.

Ernestomeda **LEED Compliant** for credit IEQ 4.5 "Low Emitting Materials - Furniture and Seating". This means that ernestomeda kitchens have low emissions of volatile organic compounds (VOCs), which include formaldehyde.

The certificates issued by the Japanese Ministry affirm that the **IDROLEB** panel leads the world in its emission values, in the certifications achieved, and for the environmental protection guarantees it provides to the furniture unit and its purchaser.

Choosing Ernestomeda means entering an exceptional world where **quality, environment-friendliness** and a **focus on safety** are successfully combined. Our commitment in these areas has been rewarded by major international certifications. All the Management Systems adopted by Ernestomeda have been certified by **SGS**, an independent body, **world leader in services for the inspection, auditing and analysis of industrial** goods, services and systems. SGS uses strict, meticulous tools to verify the compliance of the corporate processes with the relevant standards and their relative improvement. A company has a duty to be aware of the needs of the environment, the ethical management of production operations, and **the protection of resources and people**. This awareness expresses the innovative concept of a way of doing business that is never an end in itself, because it is combined with the responsibility and sensitivity Ernestomeda has always shown in its social and human relationships. We prioritise use of the best design solutions and work constantly to deliver **a product** that not only offers **outstanding design** but is also tough, **safe** and of **impeccable quality**. To achieve this, we perform tests on materials, both in our own in-house laboratory and at the best laboratories in the sector, during both the design phase and subsequent quality control procedures. These tests are conducted taking the national and/or international standards as benchmarks or (especially where gaps emerge in the standards) on the basis of in-house technical specifications.
