MATTRESSES

The use of exclusive materials is combined with the use of cutting-edge technologies such as the Bonnel springing in which each spring is made of steel wire, high-resistance phosphated and electronically tempered. The pocket coils mattress, created for the prevention of classic column disorders, has each spring covered in Fibertex to be independent of the others and work proportionally to the pressure exerted on it. The weight is thus optimally distributed over the entire surface of the mattress. The 7 zones of differentiated support also allow an absolute customization of the rest.

Covers: fabric with antibacterial and antifungal treatment and the stain resistant protection Teflon Dupont
